Cord End Styles

We produce a range of cord end styles that are usually available in both plastic and metal.

Cord End with Cap

For this style, the cord is pulled through, knotted and then pulled down so it sits inside the cord end. The cap is then fixed to the underside of the cord end to hide the knot.

Aglet

Aglets are available in metal and plastic. A metal aglet is crimped onto the end of the cord. A plastic aglet is wrapped around the cord and heated to seal.

Cord End with Screw

This style involves inserting the cord into the cord and a screw is then used to hold the cord in place.

Open Cord End

An open cord end style works the same way as the cord end with cap, but the knot is visible.

Cord Toggle Styles

There are a number of standard styles of single and double hole cord stoppers in both plastic and metal.

Single Hole Stoppers

Double Hole Stoppers

Branding & Colours

There are some personalisation options available for your cord ends and stoppers depending on the chosen style.

Design & Branding

While many of these locks and stoppers are standard items supplied unbranded, metal items can be branded with engraved, raised or printed designs.

Plastic aglets can also have printed designs. Mould charges will apply.

Colour

Plastic cord locks and stoppers are commonly available in black, white and transparent but we can dye to match where required (minimums will apply).

Metal items can be plated in a range of metal finishes along with enamel and rubber coated colours that can be matched to Pantones.

You now have all the tools to get designing your cord ends and toggles, but if you still have any questions, do not hesitate to get in touch. We look forward to hearing from you and seeing your designs.
